MEMBER ROCHESTER TOOL & MACHINE ASSOCIATION

Mike McDeid,
President,
Paragon Steel
Rule Dies.

Quality Products & Services Since 1979

Established in 1979, Paragon Steel Rule Dies has provided high quality, steel rule dies to a variety of industries including printers, folding box manufacturers, corrugated manufacturers, foam converters, finishing binderies, label and gasket manufacturers. With the advent of computer controlled automation, Paragon expanded its capabilities by providing laser machining and waterjet cutting services. In 1998, to accommodate a growing business, Paragon moved into a larger facility. Over time, Paragon has grown and evolved into a modern steel rule die producer and a laser/waterjet generated parts manufacturer. For almost 30 years, our business philosophy has remained constant: We will always produce the finest crafted products at a competitive price, with the fastest delivery possible.

A Full Service Company

Paragon not only provides manufacturing services, our in-house design/CAD department provides design and development services and will interact with your personnel to help you answer any questions you may have about the application of your product. For quality assurance, we can easily generate laser or waterjet machined prototype parts to help you verify and refine product integrity. For steel rule die customers, we can construct trial samples in paper, corrugated, plastic or rubber materials. Our customers not only benefit from our full service capabilities, they benefit from our 29 years of experience and our dedication to quality.

Exceptional Service, Guaranteed Results

Paragon Steel Rule Dies is equipped to respond to the most demanding customer requirements. State-of-the-art computer controlled machinery and experienced technicians allow us to fabricate close-tolerance, complex-shaped products with greater accuracy, efficiency and shorter delivery cycles. In fact, we are so confident about our capabilities and expertise, we guarantee every order that comes out of our facility. Where else can you find that kind of quality assurance.
